

Complementary dynamic relaxation layer (step 8 of the CP chain)

(a) Dynamic relaxation timescale near T_c

$$\tau_{\text{relax}}/t_H \sim 10^{-37} \text{ at } T_c$$

(b) CKM-induced $\bar{\theta}_0 \sim 10^{-19}$ decays to zero on $\tau_{\text{relax}} \sim 10^{-39}$ s
