

Explicit O_χ from $K3$ topological sectors ($b_2 = 22$) $\oplus$ quark flavours ($N_f = 6$): $N = 28$ spectrum is GUE when T -breaking dominates

$O_\chi = Q_{K3} \oplus M_F + V_T$ at $\kappa_T = 2$
(strong T -breaking regime)

GOE $\rightarrow$ GUE crossover as T -breaking grows
(Dyson threefold way in action)

GUE signature emerges at $\kappa_T \geq 2$
BF(GUE/Poi) > 30 = STRONG evidence
